

1. BASICS

1.1. Parties

You are at least 18 years old, and at least the age of majority where you reside. We are Mile Unity Foundation (mile.global), a Korean corporation which conducts business from premises at Seoul, Gangnam, Teheran-ro, 128, 8th Floor, Teheranro 128, Gangnam-gu, Seoul. This is a legal agreement between you and Mile Unity Foundation.

1.2. Service

Mile Unity Foundation makes and maintains application called Mile. Mile informs users about virtual currencies, cryptocurrencies, and blockchain tokens (together, “Digital Assets”) through third-party information, and enables users to access and transfer Digital Assets recorded on third-party blockchains.

This application should help to protect human rights, like privacy. Mile is designed to respect your privacy. We don’t have access to your public or private keys: if you lose them, we can’t help recover them. Install them on a second device or, at the very least, write them down.

1.3. Agreement

This agreement lets you use Mile application, services, and support at no charge, as long as you respect certain obligations, understand certain constraints, and are comfortable with certain data practices. You’re free to terminate the agreement by stopping to use Mile. We’re free to stop providing any aspect of it.

This agreement doesn’t apply to third-party information, like the evolving set of RSS feeds integrated into Mile. Nor does this agreement apply to clearly-marked third-party services offered on the Mile platform. Nor does this agreement cover your relationship with the Digital Assets with which Mile lets you interact, but which Mile Unity Foundation neither created nor can influence. Where third parties apply their own terms and policies, it’s worth reviewing them.

1.4. Updates

When we update this agreement, we’ll push it to Mile, identify it in the release, show the change date, and archive the previous version online. Unless the change is immaterial or to your clear advantage, we’ll propose it 30 days in advance, so you have time to reject the change by ceasing use.

2. OBLIGATIONS

2.1. Take Responsibility

Mile application is free of charge. The following three items are therefore fundamental to our agreement:

First, we can't recover your Public Key or Private Key. We have no access to it. If you don't install the Public Key or Private Key on a second device, write it down, and keep it in a safe place, you may lose access to your Digital Assets forever. Don't do that.

Second, Mile Unity Foundation isn't liable for any losses or damages that result from providing you with Mile application, services, and support. Nor shall our liability to you exceed, under any circumstances.

Mile Unity Foundation doesn't create, and has no control over, any of the Digital Assets you interact with through Mile. You, alone, are responsible for the Digital Assets you choose and use. It's therefore up to you to act prudently by doing at least four things.

- a) You can't act prudently if you haven't learned the basics about the Digital Assets you're considering interacting with. Carefully review the list of supported Digital Assets before engaging in any transactions. Search for them online. Vet them carefully.
- b) Take a moment to back up all private keys, backup phrases, and passwords (collectively, "Private Key Information"), or you could lose access to your Digital Assets forever. Mile doesn't require you to register or log in, but does ask you to generate the Private and Public Keys needed to make transactions. Those Private Keys are only stored locally, on your device. Losing Private Key Information is therefore no harder than dropping your phone in a lake, experiencing a bad application update, or other events typical of modern digital life.
- c) Secure your devices and your backups. If someone steals your Private Key or accesses your devices, they could get into your Digital Assets. Networks, devices, and application environments are rife with viruses and malware. Carefully guard your Private Key Information; take the time to update and secure your devices; use sites (like Security Planner) to learn about improving your online safety.
- d) Even if you delete Mile application from a device, data may remain behind. On a shared device like a public computer, this could allow someone to access your transactions without authorization. Take care where you install Mile, and extra care in deleting it.

2.2. Act Prudently

Mile Unity Foundation doesn't create, and has no control over, any of the Digital Assets you interact with through Mile. You, alone, are responsible for the Digital Assets you choose and use. It's therefore up to you to act prudently by doing at least four things.

- a) You can't act prudently if you haven't learned the basics about the Digital Assets you're considering interacting with. Carefully review the list of supported Digital Assets before engaging in any transactions. Search for them online. Vet them carefully.
- b) Mile doesn't require you to register or log in, but does ask you to generate the private and public keys needed to make transactions. Your Private Keys, and passwords (collectively, "Private Key Information") is only stored locally, on your device. Losing Private Key Information is therefore no harder than dropping your phone in a lake, experiencing a bad application update, or other events typical of modern digital life. Back it up or, even better, install Mile on another device with the same Private Key, and make sure it works, or you could lose access to your Digital Assets forever.
- c) Secure your devices and your backups. If someone steals your Private Key or accesses your devices, they could control your Digital Assets. Networks, devices, and application environments are rife with viruses and malware. Carefully guard your Private Key Information; take the time to update and secure your devices; use sites (like Security Planner) to learn about improving your online safety.
- d) Even if you delete Mile application from a device, data may remain behind. On a shared device like a public computer, this could allow someone to access your transactions without authorization. Take care where you install Mile, and extra care to eradicate every trace when you delete it.

2.3. Play Nicely

Mile Unity Foundation has a strong commitment to user autonomy. But there are some things either Mile isn't designed to support, or Mile Unity Foundation isn't allowed to. You agree not to:

- a) use Mile in a way likely to interfere with other Mile users or servers, such as excessive API calls or network spam; or
- b) use Mile in a manner contrary to the laws of South Korea or your local laws.

Ensure your transactions with a Digital Asset conform to its rules, especially with smart contract systems.

2.4. Respect Others' Work

Mile is made up of intellectual property. That includes intellectual property held by Mile Unity Foundation, like copyright in Mile's code; copyright in our text, images, and sounds; and trademarks in the distinctive words, symbols, and designs that identify Mile Unity Foundation and Mile.

We licence Mile to you, royalty-free, on a non-exclusive, worldwide, but personal and non-transferable basis. We don't licence the right to re-distribute Mile, modify its code, or use its content or Mile Unity Foundation's trademarks in other application or projects. Those require Mile Unity Foundation's written permission first.

You may, yourself, choose to provide feedback on Mile. We'll assume you've allowed us to use and keep your feedback, incorporate it, and hold a non-exclusive perpetual licence in it without royalty or obligation.

Third parties provide information, application libraries, and services that Mile uses or is partly built on. We assert no copyright in the RSS feeds we pass through. We do not own third-party application libraries. We make use of third-party platforms. Please refer to and respect relevant third-party licenses.

3. CONSTRAINTS

3.1. No Guarantees

Mile application, services, and support are provided at no cost, as is and, to the greatest extent laws allow, without any warranty at all. Please therefore note that we don't warrant Mile is of merchantable quality or fit for your purpose, even if you've notified us of the purpose. Nor can we warrant that Mile is bug-free. Bugs are inevitable. We work hard to rank and squash them.

3.2. Moving Parts

Using application to interact with Digital Assets is risky. It depends on a complex chain of moving parts working together, and working properly.

We've described basic steps we expect you to take to act prudently, and set out the extent of our liability and of your indemnity to us. For the same reasons, we can't be liable to you for, and disclaim the risks involved in, these moving parts. They include:

- failures in your connectivity, hardware, other application, and operating system (mobile or desktop), and how these interact with each other and with Mile;
- cloud backup application that may upload your private files or information to third-party services, although we try to disable this functionality's ability to store your Backup Phrase or private keys in the cloud;
- malware, viruses or other malicious application that is able to take control of or interfere with your Mile instance;

- communication delays between your Mile instance and a node or relay service for a Digital Asset;
- version updates that are incompatible or don't work properly on your device; and
- theft of Digital Assets.

The same disclaimer of liability and risk applies to any damages or issues arising from our free technical support service. It is provided on a best-efforts basis. You get what you pay for.

3.3. Blockchain Interaction

Mile provides functions for sending Digital Assets transfer instructions. Mile doesn't control the blockchains to which the instructions are sent. That puts some constraints on what we're able to do or be responsible for.

The only authentic record of Digital Assets transactions is the applicable blockchain. We can't guarantee that the transfer instructions will be acted on and your transactions stored on a blockchain, nor that once stored, they remain on the blockchain.

Many Digital Asset systems require transaction fees, like mining fees. If the transaction fees are set too low or too high, you may incur losses. We can't be responsible for them.

Mile's market information about Digital Assets reflects a point in time for underlying data fluctuating constantly. The sending and execution of transfer instructions necessarily involves a longer period than that point in time, and the data values reflected in your transactions will differ accordingly. We're not responsible for that difference.

4. DATA COLLECTION

4.1. Personal Information Processing

“Personal information” includes anything about you or that could be used to identify you, either on its own or in combination with other information. Consistent with our pro-privacy approach, we avoid collecting personal information. Your public and private key information is stored locally on your device. Only the person in control of the device with your Mile instance, so you have everything you need to port your activity to other applications.

Personal information we do hold is treated as confidential. We bind all of our staff and seek to bind every relevant contractor, who we've identified, to confidentiality agreements. We use only encrypted connections between our own servers, and insist on them with third-party servers.

We do not provide personal information to anyone else unless legally compelled to and, to the extent legally permitted, provide notice of having done so to the affected parties.

4.2. Necessary Identifiers

In order to maintain your settings across the Mile instances installed on different devices.

Your Mile ID is a persistent identifier, it is in the nature of personal information. However, we do not require information to be tied to it beyond your app settings, like the wallets to display and sequence to show them in. We do not expose the Mile ID outside our systems. We do not even have information about whose Mile ID it is.

4.3. Opt-In Identifiers

Although we do not require other personal information to be tied to your Mile ID, we do give you the opportunity to do so through Mile. Separately, you may choose to provide personal information to us through the support process.

The Mile module requests your email address in order to provide you with updates and let you port your Mile settings. It also asks you to choose a display name. After that, Mile defaults to the display name and email address you have already tied to your Mile ID.

The support process is not tied to your Mile ID, but user communications generated through the support process may include personal identifiers, and are exposed to a contracted third-party. Further, when you reach out to our support teams on uncontracted social media platforms, they may respond on the same platform, to which you will therefore have exposed the information you've chosen to disclose.

We delete email address and, once the limitation period has run in your jurisdiction, customer support information on request. You can always withdraw consent for email subscriptions by clicking on the link at the bottom of the email.

4.4. Personal Information Holdings

In addition to necessary (Mile ID) and opt-in (Mile, customer support) identifiers, we have access to:

- your transaction addresses and, occasionally, public keys, and the blockchain transactions you make using them, which may be relayed through servers (“nodes”);
- phone logs, Web logs, and third-party cookies.

Transaction information is publicly visible due to the very nature of distributed ledger systems. We delete phone and Web logs on a rolling basis.

Mile Unity Foundation does retain some aggregated, anonymized Mile usage information in order to improve its functionality and user interface. This information is not stored at the individual user level or in conjunction with any device-specific or persistent identifier.

4.5. App Permissions

The Mile mobile app seeks camera permissions. These permissions are used only to read a QR code and store it on-device, to pair another Mile instance; and only at your prompting. Mile does not receive any other camera input and does not otherwise access your camera.

5. INTERPRETATION

5.1. Enforcing Selectively

Failing to assert a right under this agreement doesn't waive the right to assert another right, or the same right next time.

5.2. Going to Court

Other than conflicts of law principles, this agreement is governed by the laws applicable in South Korea, or by the local laws of your country. The Convention for the International Sale of Goods doesn't apply.

5.3. Nailing Down our Agreement

This is the whole agreement between you and Mile Unity Foundation. It supersedes any other agreement, representations, or understandings, however communicated, and can be amended only if both parties agree, in writing, with copy to get@mile.global. Where we provide this agreement in more than one language and they don't precisely agree, the English-language version takes precedent.

5.4. Restructuring our Business

Mile Unity Foundation may assign this agreement upon 15 days' notice.
